LUMORA IT CASE · TASHKENT · 31 OCTOBER 2026

CASE D

Smart Market Prices

Lumora × AICA × AI Alliance · IT Case Competition

3 min	2 min	100
PITCH	JURY Q&A	POINTS

THE PROBLEM

Entrepreneurs spend excessive time and money purchasing goods, because there is no centralized analytical database of actual market prices, supply and demand.

WHAT THIS MEANS

To restock, a small business owner calls suppliers one by one, visits several bazaars, or scrolls Telegram channels where prices are old or unclear. Prices differ from seller to seller and change every week. Nobody can easily see where supply is short or what will be in demand next, so owners overpay, waste hours, and buy too much or too little.

MEET A TYPICAL USER · EXAMPLE

D **Dilshod, 34**

Runs a grocery shop in Chilonzor, Tashkent

- ⏱ Spends about **2 days a week** visiting markets and calling suppliers
- $ Pays a **different price** for the same sugar from week to week
- ? Has **no idea** if today's price is fair or if it will rise next week

YOUR CHALLENGE

Design a practical digital or AI-powered solution that gives entrepreneurs **reliable, current and comparable** information on market prices, supply and demand, so they can buy smarter. You might use one of these directions or combine several:

Live price board · Supplier comparison · Price history & trends · Demand forecasting · Price-drop alerts · Group buying · Verified supplier ratings · Photo-to-price AI

EXPECTED OUTCOME

Pitch deck
Covers all 12 tasks on the next pages

Minimal prototype
Shows the core buying experience

Business & growth plan
Why shops and suppliers would use and pay for it

TASK COMPLETION CRITERIA

The 12 tasks

Points show how much each task is worth on the judges' sheet. Examples are ideas, not answers.

PART A · STRATEGY, MARKET & BUSINESS MODEL · 50 PTS

01 Mission, Vision & Value Proposition — 10 pts

What problem you solve now, the long-term change you want, and what becomes faster, cheaper or more reliable for buyers and sellers.

EXAMPLE "Every shop owner in Uzbekistan knows today's fair wholesale price before leaving home."

02 Market Analysis: Size, Trends & Competitors — 10 pts

Your target segment, a size estimate with its source, 2–3 trends, and existing alternatives (Telegram price channels, calling suppliers, visiting bazaars).

EXAMPLE Segment: small grocery & household shops in Tashkent · size from official statistics · alternative: 15 calls per week to suppliers.

03 Target Users & Adoption Strategy — 5 pts

Who uses it and who pays: shop owners, cafés, wholesalers, distributors, market vendors. How you win the first users and why they come back.

EXAMPLE First 50 users: shops around one wholesale market, onboarded in person with a free month of price alerts.

04 Product / Feature Roadmap — 10 pts

MVP first, then next features, then the long-term platform, each with a realistic time estimate.

EXAMPLE Month 0–3: price board for 100 core goods · 4–9: supplier offers & alerts · 10–18: demand forecasts & group buying.

05 Monetization / Revenue Model — 10 pts

Who pays, for what, and why the price makes sense. Go beyond a basic subscription.

EXAMPLE Free price lookup · Pro alerts for shops · supplier listing fees · commission on group orders · market reports for banks and distributors.

06 Go-to-Market & Growth — 5 pts

How you reach the first users and expand, step by step: markets, associations, Telegram, field agents, partners.

EXAMPLE Pilot in one market → all Tashkent wholesale markets → regional bazaars → cross-border suppliers.

PART B · FEASIBILITY, PRODUCT & INNOVATION · 50 PTS

07 Financial Projections: 3 Years & Key Metrics — 10 pts

Users, revenue, main costs and 3–5 KPIs per year, with the assumptions written next to each number.

EXAMPLE KPIs: weekly active buyers · price points collected per day · paying shops · savings per order · data accuracy %.

08 Risks, Challenges & Mitigation — 5 pts

The main risks and a practical answer to each one, not just a list.

EXAMPLE Risk: sellers post fake low prices → Answer: verified sellers, receipt photo check, outlier detection.

09 Prototype / Demo Concept — 10 pts

Show how a buyer or a supplier uses the product: clickable screens, a slide demo, a Telegram bot or a mini website. A full product is not required.

EXAMPLE A Telegram mini app where a shop owner types “sugar 50 kg” and sees today’s prices at 6 suppliers.

10 Sample Screens / UI Mockups — 5 pts

3–6 key screens with one consistent design.

EXAMPLE Price board · product page with price history · supplier comparison · price alert · order cart · supplier dashboard.

11 Demonstrate One “Killer Flow” — 15 pts

One complete journey from start to finish that proves the solution saves time and money.

1. Shop owner needs 20 goods
2. Searches the price board
3. Compares 5 suppliers & price trend
4. Joins a group order or books delivery
5. Confirms the price on delivery
6. Saves time & money; data improves for all

12 Propose One New / Differentiating Feature — 5 pts

At least one feature beyond a simple price list, and why it matters for the user.

EXAMPLE AI that reads price photos from market stalls and turns them into a live price index.

HOW YOUR WORK WILL BE EVALUATED

What the judges look for

Clarity, coherence & narrative

One logical story: problem → solution → users → business model → growth → prototype → vision.

Feasibility of roadmap & time

Ambitious but realistic plans. Judges can see how it would actually be built and launched.

Innovativeness in monetization

Revenue ideas that fit the wholesale and retail market, not just a generic subscription.

Quality & polish of UI / prototype

Organized, consistent and easy to understand. Would a busy shop owner actually use it?

Realism in metrics

Numbers come from clear assumptions. No unsupported or inflated figures.

Strategic thinking about expansion

Growth beyond the first market: more cities, regions, categories, countries, partners.

WHERE THE 100 POINTS COME FROM · TASK NUMBER / POINTS

Part A · tasks 1–6 · 50 pts Part B · tasks 7–12 · 50 pts The killer flow (task 11) is worth the most: 15 pts.

FINAL SUBMISSION CHECKLIST

- [ ] A clear pitch deck covering all 12 tasks
- [ ] A minimal prototype or demo of the core buying experience
- [ ] A realistic business and growth plan with logical assumptions
- [ ] A story investors, suppliers, business associations and public institutions can follow

ON STAGE · 5 MINUTES PER TEAM

3 min Your pitch

2 min Jury questions

Lead with the problem and Dilshod's pain, show the killer flow live, end with your numbers.

DO

- Use real Tashkent markets and goods in your examples
- Write the assumption next to every number
- Show one flow working end to end

AVOID

- Generic "marketplace for everything" ideas
- Unsupported user or revenue figures
- Slides full of text with no screens
